Fujitsu HPC Solutions to Meet Customers' Demands

- Supercomputers, Fujitsu-developed Arm CPU and x86
- Single system image operation with Fujitsu system software
- High application performance, availability, and reliability

Powerful Software Accelerates Customers' Business

■ Fujitsu software for scalability and Open env. for easier deployment

Applications

Fujitsu Technical Computing Suite / RIKEN-developed Open Source System Software

Management software

System management for high availability & power saving operation

Job management for higher system utilization & power efficiency

File system

FEFS
Lustre-based distributed file system

LLIO*
NVM-based file I/O Accelerator for Fugaku

Programming environment

XcalableMP, FDPS

Open MPI, MPICH(PiP), DTF

OpenMP, COARRAY, Math.libs.

C, C++, Fortran, AI frameworks

Debugging, Tuning tools, Containers

Open environment

Management software

OpenHPC / BCM

Programming env.

Additional rich OSS-based Compiler / MPI and tools

Multi-Kernel System: RHEL8 & light-weight kernel (IHK/McKernel)

RHEL8

arm

Fugaku Co-developed w/ RIKEN

* LLIO for Fugaku only

FX1000

FX700

“Fugaku” and its Family for an Evolving HPC

- Wide range support of software environment accelerates customers' business and resolves social issues in many fields
- Fugaku hardware delivery had been completed, and software setup is undergo for general use for FY2021
- Fujitsu continues to provide solutions utilizing technologies for customers' Digital transformation

Supercomputer Fugaku will be used to help fight against COVID-19

UPDATE

[April 24, 2020] A new project entitled "Prediction and Countermeasure for Virus Droplet Infection under the Indoor Environment" has been added.

[April 17, 2020] RIKEN is accepting research proposals for trial use of Fugaku to fight against the novel coronavirus.

RIKEN, in coordination with the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT), has announced that the supercomputer Fugaku will be made available for research projects aimed to combat COVID-19.

Fugaku is currently being installed and is scheduled to be available to the public in 2021. However, faced with the devastating disaster unfolding before our eyes, RIKEN and MEXT decided to make a portion of the computational resources of Fugaku available for COVID-19-related projects ahead of schedule while continuing the installation process.

Supercomputer Fugaku (currently being installed)

Fugaku is being developed not only for the progress in science, but also to help build the society dubbed as the “Society 5.0” by the Japanese government, where all people will live safe and comfortable lives. The current initiative to fight against the novel coronavirus is driven by the philosophy behind the development of Fugaku.
